POWERMINI[◇]

Shaver System

Now you don't have to sacrifice power for size

The DYONICS[®] POWERMINI™ Shaver System packs the power and features of a full-size shaver into a compact handpiece, designed to access smaller, tighter joints. This compact, lightweight shaver allows the freedom of movement required for precise control, plus the power to swiftly resect the toughest tissue and bone. Teamed with our expanded line of small-diameter blade and burrs, the POWERMINI Shaver meets the demands of today's multispecialty arthroscopy facility.

The most powerful, ergonomically-designed solution for hand/wrist, foot/ankle and elbow procedures.¹

- Fast resection rates help to remove tough soft tissue, quickly
- High operating torque helps to remove dense bone such as found in the ankle joint, and protects against sudden stalls
- The resection rate using the POWERMINI Shaver with a 3.5 mm full radius blade is nearly the same as using our full-size POWERMAX ELITE Shaver with a 3.5 mm full radius blade¹

¹ 2009 data on file with Smith & Nephew

“The DYONICS POWERMINI Shaver is the best mini system solution on the market for distal joint specialists – it combines powerful resection with a small, lightweight design, which translates into more efficient surgery and better patient care.”

- Richard D. Ferkel, MD

New blade and burr geometries

Providing a more comprehensive POWERMINI blade/burr line

DYONICS[◇] POWERMINI[◇] **2.9 mm Barrel Burr (72201520)**

Barrel design provides more side-cutting surface area, improving cutting efficiency for the excision of more bony anatomy.

DYONICS POWERMINI **INCISOR[◇] Plus ELITE** **2.9 mm Blade (72201513)**

Oval cutting window and large inner teeth combine to allow aggressive resection and gentle smoothing of frayed tissue when performing arthroscopic synovectomy.

DYONICS POWERMINI **CURVED INCISOR Plus Elite** **3.5 mm Blade (72201515)**

Provides aggressive resection in hard to reach areas.
